### Language

 English - B1~B2

 Serbian - Native Speaker

### Hobbies

 Math

 Electronics

 Algorithms

 Design Patterns

 Beekeeping

 Sports

### Summary & Technologies

I am a full-stack web developer with a degree in Software Engineering & Information Technology (SIIT) from The Faculty of Technical Science (FTN) at the University of Novi Sad, attained in the period 2017~2024. My studies were suspended from 2020 to 2022 during the Covid 19 pandemic.

#### Programming languages I know:

 Java

 C++

 Python

 JavaScript

 C#

 TypeScript

#### Frameworks I know:

 Angular

 .NET Core

 PostgreSQL

 Vue.js

 Spring Boot

 MySQL

 React.js

 Django

 Oracle

 Next.js

 MongoDB

 SQL Server

Throughout my studies, I engaged in numerous independent projects to enhance my preparedness for forthcoming challenges. Currently, I am fully ready to contribute effectively within a team environment, eager both to share my knowledge and to assimilate new insights into my existent knowledge.

### Projects

During my academic studies, I developed various applications. I will briefly describe 2 projects:

1. The '**Uber application**' is a taxi platform designed to facilitate dynamic ride selection and management for both drivers and clients. *Tehnologies used:* Spring Boot , Angular , PostgreSQL , WebSockets, OAuth2, Google maps , Junit 5, Integration tests, Selenium & Jasmine.

Link: <https://github.com/filip13111998/NVT-KTS-22-23/tree/main>

2. **BeeCons** represents an innovative application designed to address the operational issues associated with a substantial number of hives. Furthermore, it facilitates connectivity among all the beekeepers on the territory of Serbia. Its primary aim is to simulate electronic functions within the beehive.

*Tehnologies:* Spring Boot , Angular , H2, Microservice Arhitecture supported by Netflix , Leaflet.js, D3.js and Python Scripts.
